

## HTML STRUCTURE

1. HTML Describes the Structure of Pages.
2. HTML Uses Elements to Describe the Structure of Pages.
3. A Closer Look at Tags.
4. Attributes Tell Us More About Elements.
5. Body, Head & Title.
6. Creating a Web Page on a PC.
7. Looking at how other sites are built.

### Summary

- HTML pages are text documents.
- HTML uses tags (characters that sit inside angled brackets) to give the information they surround special meaning.
- Tags are often referred to as elements.
- Tags usually come in pairs. The opening tag denotes the start of a piece of content; the closing tag denotes the end.
- Opening tags can carry attributes, which tell us more about the content of that element.
- Attributes require a name and a value.
- To learn HTML you need to know what tags are available for you to use, what they do, and where they can go.
